

Homemade triangular seat

Sitting independently in the sand

Pflegeschätze

Keywords: Playing - Independence - Physical disability

Initial situation

A parent says that their child cannot sit still very well.

The care treasure

The family built a triangular seat from old shelf parts.

The seat has a platform for the child to sit on. The child leans against two platforms that are positioned at a 90° angle to each other. This supports the child on the right and left. A round wooden handle is attached to the platform on which the child sits. When seated, this handle is positioned between the child's legs.

Benefit

The homemade seat makes everyday life easier for parents. This is because the child can sit on the seat by themselves without falling over. For example, on uneven surfaces such as sand.
